

The Routing & Packaging Company Ltd

Packaging and Transport Solutions Specialist, TRP are now offering the design and manufacture of bespoke Visual Control Systems - VCS.

TRP are a well established company and well known for the manufacture and supply of high quality transportation cases and protective components to a variety of industry sectors.

With a wealth of 30 years experience in the business the Managing Director has specialised in the protection, storage and transportation of high value components, specialist tools and line side supply systems. Our price, quality and attention to detail are second to none. TRP have gained most of their customer base from recommendation and believe that their flexible, resourceful and versatile approach is a major contribution to their success.

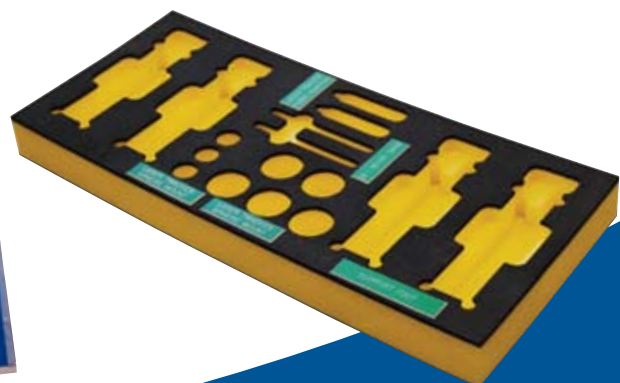

TRP is a ISO 9001 registered firm and all the wood we use is ISPM 15 approved. The Routing and Packaging Company are committed to a programme of continuous development and improvement and are now proud to offer Visual Control Systems.

benefits of using VCS -

- Reduces damage to components
- Increased time-efficiency
- Waste reduction
- Highlights missing components and tools
- Reduces FOD
- Increased security

All of these factors that reduce costs and increase efficiency

The use of a 'quick visual check' to ensure that every tool that was been taken to the work site or is present at the line side is withdrawn after the task is complete, has to be one of the least cost and fastest mechanisms to ensure that nothing undesirable is left behind.

Visual Control Systems combines the use of apertures of the relevant shape and depth with both contrasting coloured 'face' and 'acceptance' foams in order to provide the relevant grip, protection and visual evidencing of presence or absence for your tool set or components - whatever the complexity level.

No job should be undertaken without the relevant tooling and TRP feels that in VCS it can deliver the best FOD-elimination tools that are available.

Personal site consultations are provided at no cost in order to advise on the best solutions; covering the customer's needs for the protection of product, transportation and/or storage.

It is an essential part of today's lean, fast-paced production environments that the front-end of an effective and profitable production line should include the relevant tooling. It is a further characteristic of best practice that both on-line assembly and off-line refurbishment operations should consider and eliminate Foreign Object Debris (FOD); thereby ensuring uninterrupted production caused by the odd lost component or distraction of the operator. TRP has for years been hard at work in developing, together with its customer base, the correct tool control systems to ensure the elimination of FOD and now specialises in the production of Visual Control Systems (VCS), including:

- Bespoke flight and carry cases made to customer specifications
- Line side supply media, including trays, cabinets and trolleys
- Foam tool inserts using shadow board techniques made from British, high quality, anti-static zote foams.
- Shadow Boards

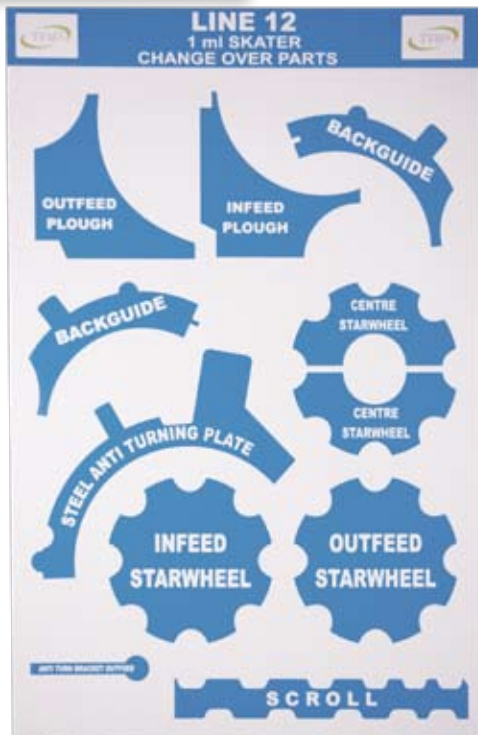

TRP can manufacture freestanding component holders for quality control inspection equipment. Made from High Density Polyethylene (HDPE) thermo-plastic, these units are designed to suit the customer's end needs.

To complete the VCS, TRP can offer Shadow Boards to help maintain good house-keeping and to aid tool control. Shadow boards can be created for any purpose and they:

- Provide storage for equipment or tools
- Organise the work place
- Assist in locating critical items
- Create visual impact

If you would like further information on Visual Control Systems or to find out about other services offered by TRP, please contact:
